HI {MERGE:{FIELD:FIRSTNAME}},

What's in store for the next 12 months? Who'd know after what 2020 threw at us, but all the signs are positive for the building and construction industry. There's a lot of community and infrastructure projects from footy fields to stadiums, schools and new residential developments, it's a good sign we are moving along. If the vaccine rollout goes according to plan, the economy ticks along and borders stay open, we can pat ourselves on the back as a country that once again has shown its tenacity, toughness and ability to work together.

STORMWATER SOLUTIONS

Stormwater runoff is rainfall that flows over the ground surface of an open area such as car parks, roads, driveways, rooftops and other paved areas, that won't (allow water to be absorbed by the ground, taking with it all sort of pollutants, litter and debris present in the surface.

GPTs are designed as the first line of defense (Primary treatment measures) against pollutants washed down by stormwater runoff in order to capture them before they enter the stormwater system or waterways.

Gross pollutant traps targets litter in general either natural leaves, branches, bark, clippings, litter, debris, pollutants, surface oils, hydrocarbons, suspended sediment and other pollutants

Our range of GPT's offer maximum treatable flow of 75 liters per second that captures up to 99 of standards gross pollutants under normal conditions. They feature high flow bypass allowing flows above treatable to bypass the unit, which are clean stormwater, after first flush has delivered litter and sediment to the GPT, continuous

separation screen. In addition to this they are easy transport and install as tanks are made from lightweight high density polyethylene, allowing easy manoeuvring.

Halgan Environmental can offer design assistance in order to specify the correct model and size required given the site conditions and the expected amount of rainfall given the site's geographical location.

WATERING BROOKIE OVAL

The Manly Warringah Sea Eagles Centre of Excellence and Grandstand redevelopment at Lottoland will cost about \$33million and is expected to be completed for the 2022 season.

As part of the redevelopment two of the Halgan 27,000 litre rainwater tanks will be installed inground to provide a whopping 54,000 litres of irrigation.

It's a great community project that will include 3,000 covered seating area, food and beverage facilities, high performance, training and administration facilities, medical and rehabilitation facilities, elite level gymnasium, aquatic recovery and rehabilitation pools and facilities to support on the rise of female sporting participation.

INNOVATIVE AND HEALTHY

There is a focus in Canberra on sustainability through both architecture and science to achieve a higher-than-average energy efficiency rating on new building projects. This is demonstrated at the Lumi Collection in Gungahlin which has a higher than average EER at 8.5 stars with features like double glazed and thermally broken windows, fresh air heat recovery units and an overall smaller environmental footprint.

In line with this, Michael Lia from Advanced Plumbing & Drains worked on the Lumi project with builders CBS Commercial and installed a raised MGT™ in the car park showcasing the benefits of the lightweight rotomoulded unit.

As a manufacturer who has been involved in making greasetraps and waste water products for over 20 years, Halgan continues to innovate and grow.

Halgan Environmental provides complete sustainable environmental treatment, with a diverse range of products to collect, treat, hold and release water. We provide suitable solutions, and support environmentally friendly urban design through services including design assistance, manufacturing, maintenance and servicing of waste and storm water solutions.

At Halgan Liquid Waste we provide servicing and pump outs of greasetraps and a range of liquid waste disposal. Designing and manufacturing the units means we know the best way to service them to ensure there's no overflows, blockages or smells. We also service and commission pumps which can be done when the pump out occurs, or as required.

For more information on products, advice on installs and applications or a site visit for a pump out, give us a call on 1800 626 753.

Around the traps

H&M ONLINE SHOPPING

Shaun Rose from Archer Plumbing Services is installing a range of sewer pump stations at the new H&M clothing warehouse and on line distribution complex in Marsden Park, north west of Sydney's CBD. Some 7 years after they opened the first store in Australia, shoppers can now buy online at major fashion retailer H&M which currently has more than 40 stores in Australia.

WOMEN ON TOOLS

This has to be one of the best run events of the year held by the National Association of Women In Construction (QLD Chapter). The Toolbox breakfast was held at TAFE Skillstech - Acacia Ridge Campus, and was a fantastic networking opportunity and great speakers.

Joel and Ben were on hand to showcase the latest at products and solutions on offer from

PANORMA BOX HILL

Just over 4 km from Melbourne city centre, Panorama at Box Hill is a new mixed development project due for completion later this year. In addition to the residences on offer there's some great features like the rooftop Terrace/garden and function facilities, plus some great new restaurants.

As part of the project Halgan fabricated a 7500 litre custom greasetrapping unit that's being installed to

Halgan and Halgan Environmental. service the facilities.
